RESUMEN

Relentless problem solver applying managerial, analytical, design and technical skills. Efficient and practical leader with outstanding success in application development for digital products, ERP, live and on-demand video streaming, search engines and web applications, in the cloud and on-premise infrastructure. I also have experience gained in projects that will fail technically and politically, key failures to learn and advance in new challenges. I have experience in management of development teams, infrastructure, support and operation, with the use of agile methodologies, as well as technical knowledge and the ability to lead, teach and design development solutions, with a focus on agility, usability, security, performance and scalability, on Baremetal/VM/Container-based platforms like docker using kubernetes on cloud and local infrastructure

WORK HISTORY

MEGAMEDIA SA

14-05-2018 -
CURRENT

Gerente TI

Activities

- Manage the IT area, composed of the following heads, Systems, Web, Support, Infrastructure, UX-UI and TMO, areas responsible for the development and operation of digital products and back office services.
- Preparation and execution of IT budget
- Evaluate, propose the implementation and / or development of business platforms, with a view to business optimization
- Evaluate and propose new flexible, secure and scalable technologies and architectures to enhance business performance according to the strategic definition.
- Execute the implementation of projects according to scope, costs and times.

Achievements

Among the achievements made with a lot of work, not without mistakes or some failures, which were important to learn and apply in new projects.

Organization and strategy

- Reorientation of the IT area as a strategic area
- Design of an architecture, to achieve flexibility, security and elastic scale.
- Training and Adoption of Agile framework with SCRUM
- Adoption of Cloud computing with AWS, Azure and GCP
- Adoption of container technologies with Dockers, Docker Swarn, and Kubernetes
- Adoption of reactive technologies for new projects
- Mobile application development
- Implementation of information security policies and processes
- Implementation of policies and requirements for internal and external safe development
- DevOps implementation

Digital Services

- SSO implementation
- Cluster Swarm on Premise
- Implementation Cluster Kubernetes deployment on AWS with EKS and Kops.
- Notification Platform Implementation with Firebase

Projects and Products

- Meganoticias (<https://meganoticias.cl>)
- Mega (<https://mega.cl>)
- Mega GO (<https://megago.cl>)
- Clicky (<https://clicky.cl>)
- Virtual office implementation based on Teams for collaborative and remote work
- Implementación oficina Virtual basada en Teams para el trabajo colaborativo y remoto
- ERP Implementation

IMAGEMAKER SA

04/2017 - 05-2018

Software Development Manager

Description

Manage the area of software development, support the sales process, generating estimates and design of flexible and scalable architectures.

Execute the implementation of the projects according to requirements, estimates, technological solution and methodology proposed and approved by the client.

Define and apply new technologies, agile development processes, application of DevOps to apply continuous integration and continuous delivery, quality and vulnerability inspection of the code.

Achievements

When I start my work the situation of the area of software projects, is in tendency of loss and without being able to sell new projects, added to low profitability of the area derived from inefficiency of the current projects.

To solve the problem the directory designate the task of improving the commercial proposal for potential new projects and regularize the situation of the current projects.

The first one I did was to analyze the current process of estimation, adjusting the process and supporting the sales team making estimations and proposals of architectures, application of agile processes to solve the clients' requirements.

With the changes we are starting to see results in 3 months after 1 year without closing projects, we achieved with the new proposals the sale of 3 new projects totaling 200,000 USD on platforms JEE and .Net and infrastructure in AWS and Azure.

GURU SOLUCIONES
SA
2007 - 2017

IT Application Development Manager & Software Architect

Leadership of team for the development of portals and mobile applications for products

<http://miportal.gurusoluciones.com.ar>, <http://www.amarillas.cl>, <http://ecommerce.amarillas.cl>, <http://Plans.amarillas.cl>, <http://www.blancas.cl>, cluster of search engines, classification and indexing system, additionally backoffice maintenance with business logic.

Using agile methodologies such as SCRUM and XP, for follow-up with the project team.

Projects are mostly built using concepts of Services Orientation and application of patterns mainly in Java platform, using frameworks such as spring-framework and etc.

The operating platform is built on Linux, using application servers and projects are built using application servers such as Jboss, Tomcat, Apache. over AWS Services like EC2, S3.

These products represent approximately 30% of the company's revenues.

Projects

Customer Portal Latam 2016 - 2017

Project for the implementation of the portal of clients, with services of information consultation, payment of invoices, opening and consultation of tickets, is a project built with the use of microservices, in java platform, informix database, oracle, mariadb, mongodb, With open architecture and use of services in AWS with use of S3, EC2.

Latam Platforms Consolidation 2015 - 2016

Consolidation of web and mobile platforms for Yellow Pages and White Pages among LATAM Countries. Before this project there were a 3 platforms on each country. The project took about 12 months from the kickoff to the implementation. Build over Open Source Platform with Linux, Java, MySQL and Search Engine with Solr.

Statistical Finder With Solr For New Media Platform In Yell Chile 2014 - 2015

Create plugin for Solr Search Engine to statistical finder, to better possibility of visualization of advertises with lower investment.

Cluster Search Platform For High Availability And Search Engine 2012 - 2013

Development of a search cluster based on lucene and indexes in memory, for the advertising site www.amarillas.cl, improving the scalability and search performance.

System Manager

As System Manager he was responsible for planning, directing, supervising and controlling the processes, projects and resources related to the development of the company's information systems according to the strategic definition. Main projects are migration of Chile and Argentina online platform to new media platform over Linux, Java and Application servers like Jboss, tomcat and apache, this Projects that will result in reduced operating costs and increase the flexibility and scalability of platforms.

TELEFÓNICA
PUBLICIDAD Y
INFORMACIÓN
2006 - 2007

EDUCATION

PONTIFICIA
UNIVERSIDAD
CATÓLICA DE CHILE
2016 - 2020

Phd of Computer science

Courses

- Advanced Web Application Design
- Process Mining
- Workshop on Mobile Platforms with Android
- Workshop Software Integration

PONTIFICIA
UNIVERSIDAD
CATÓLICA DE CHILE
2013 - 2015

Master degree of Information technology and management

- Technologies and development in WWW
- Advanced IT Management Topics
- Software Development Processes
- Strategic management
- Computer security
- Leadership in IT
- E-Business
- Marketing
- Evaluation of computer projects
- Computational Intelligence in Business
- Systems architecture
- The human component in IT
- Networks: Internet, intranets and extranets
- IT for innovation, quality and entrepreneurship
- IT Operations Management
- Business Processes
- Finance
- Business Process Workshop

SKILLS

MANAGEMENT AND
DEVELOPMENT
METHODOLOGY

● ● ● ● ● ● ● ● ● ● ARCHITECTURE AND
Program Management, Project
Management, Agile Process Manager,
PMO, SCRUM, XP, RUP, SAFE

PROCESS

● ● ● ● ● ● ● ● ● ●
Design Patterns, Enterprise Architecture
with Archimate, BPMN, UML, SOA, REST,
Cloud Computing

TECHNICAL
KNOWLEDGE

● ● ● ● ● ● ● ● ● ●
Java / JEE, .NET, LAMP Platforms, Spring
Framework, Mobile Platform in Android,
Ionic, Development in ES6 with MEAN
Stack, Node.js, JavaScript, Meteor, Express,
Angular, HTML5, Ruby on Rails, Python,
PHP, COBOL, Assembly, SQL. Database
Oracle, MySQL, MariaDB, Postgres,
MongoDB. Application Servers Weblogic,
WAS, Jboss, Tomcat, Apache, NGINX, DNS
servers named.

DEVOPS

● ● ● ● ● ● ● ● ● ●
Incident management with Redmine and
Jira, DevOps profile in Linux and Windows
on-cloud (AWS, Azure) and On-premise
environments, Process optimization,
application performance in operation.
Continuous integration with Jenkins and
Puppet, version control with Git and
Subversion, code inspection with
sonarqube y veracode. Setup and Operation
with Docker Containers

PROJECTS

-
- Megamedia Virtual Office (2021)
- Portal Mega.cl (2020)
- Portal Meganoticias.cl (2019)
- Latam Customer Portal (2016)
- Social platform for yell latam (2015)
- Statistical search engine with solr for new media
platform in yell chile (2014)
- Ecommerce for products in the yellow pages (2013)
- Stabilization and optimization of the backoffice platform
in JEE de yell chile (2012)
- Clustered search platform for high availability and search
engine (2012)
- New media platform in yell chile (2010)
